(Basic) Chipset Architecture

Since I always lose the link, CPU datasheets are here:

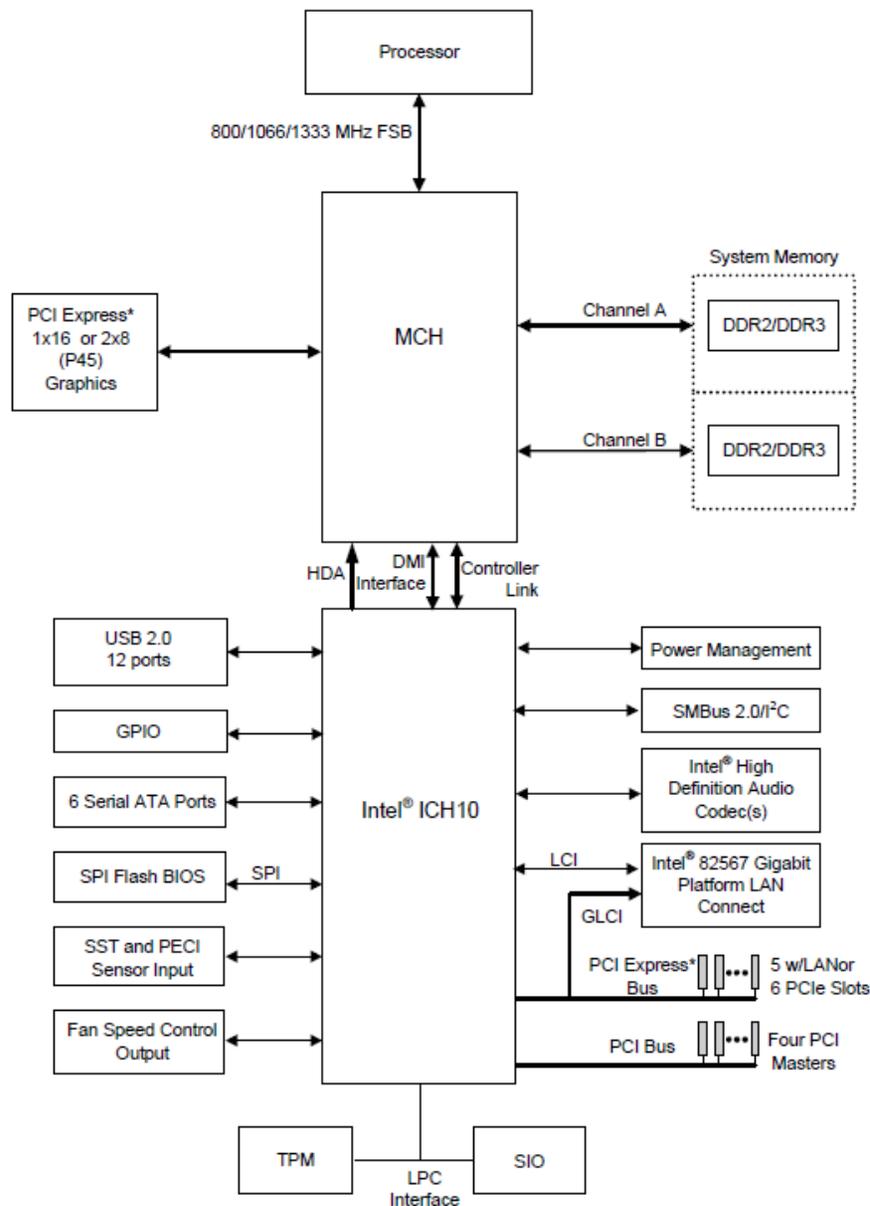

<http://www.intel.com/content/www/us/en/processors/core/core-technical-resources.html>

Mobile 4-Series Chipset Block Diagram

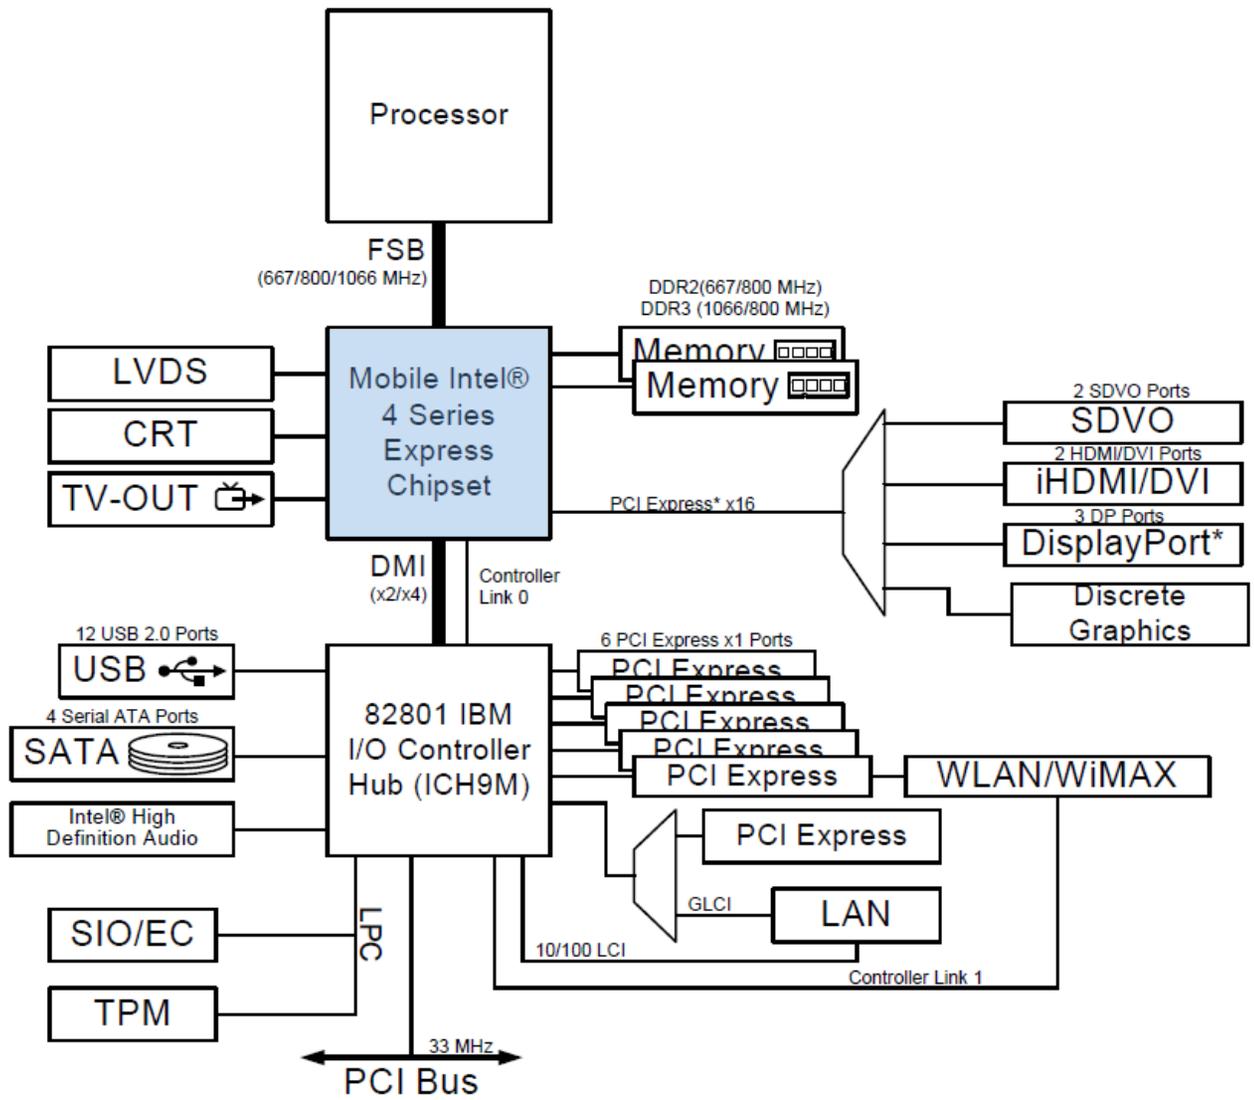

- This is a hardware model the Mobile 4-Series chipset and its logical relation to the CPU
- Specialized chips integrated onto the motherboard that interface the processor to system components.
- Two components make up the chipset: the Memory Controller Hub (MCH) and the I/O Controller Hub (ICH)
- These components must be configured to be able to sustain an Operating System.
- BIOS performs this configuration during boot
- I prefer the diagram from the Desktop 4-Series Chipset, which explicitly labels the MCH

Alternative Block Diagram

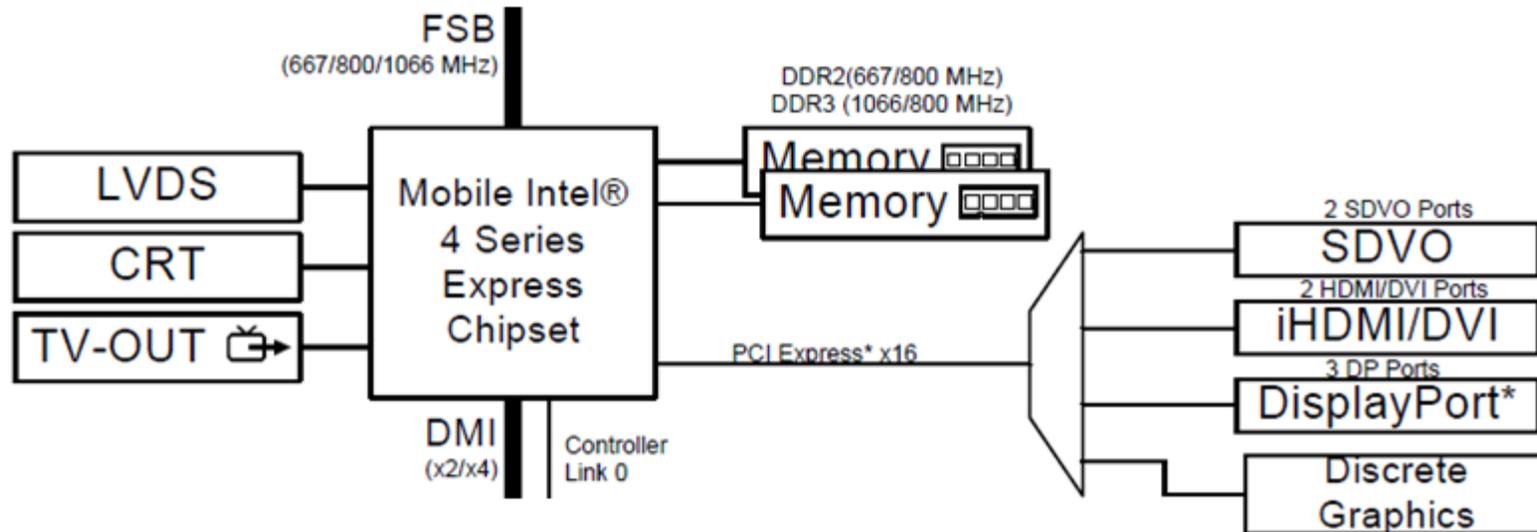

- For reference, this is the diagram layout I personally (strongly) prefer
- But it explicitly labels the MCH
- Also lists the SPI device, unlike it's Mobile counterpart
- However, the MCH on the 4-Series chipset connects to an ICH rev. 10 rather than an ICH rev. 9, which is not what's present on this example E6400 system

Mobile 4-Series Chipset Block Diagram

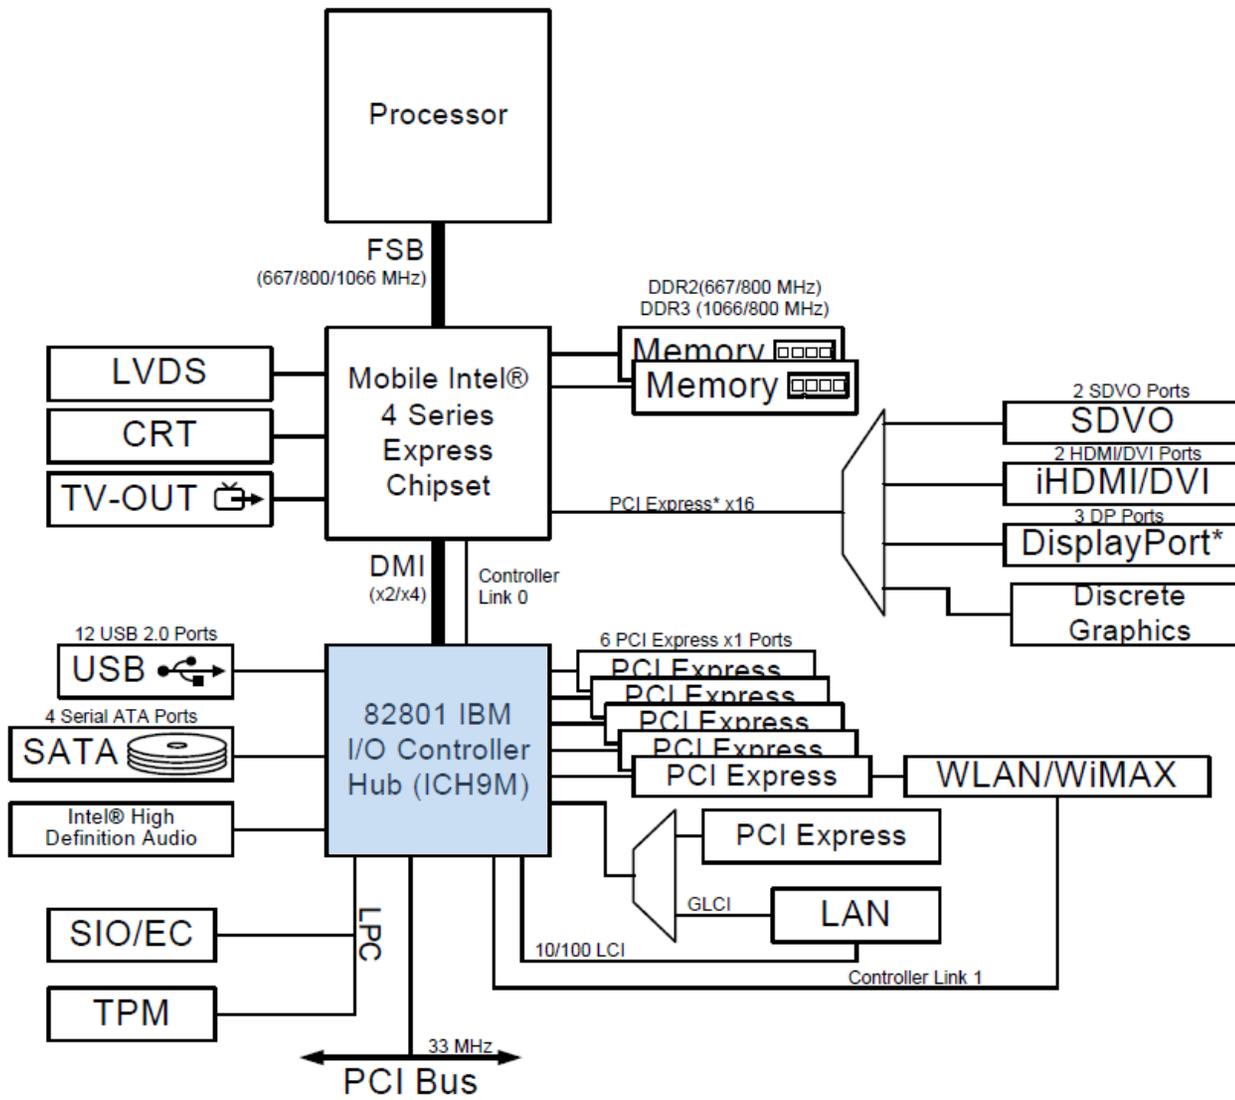

- Memory Controller Hub (MCH)
- Interfaces the processor with the rest of the system
- Connected via a fast bridge/bus (originally FSB, became HyperTransport (AMD) and QuickPath (Intel), the latter which became DMI (or DMI 2.0)
 - From a logical perspective it's invisible to us for our purposes
- Sometimes called the Northbridge
- Contains a Memory Controller and an interface for PCI Express graphics
- A 'G' in front of MCH indicates it has on-board graphics

Memory Controller Hub (MCH)

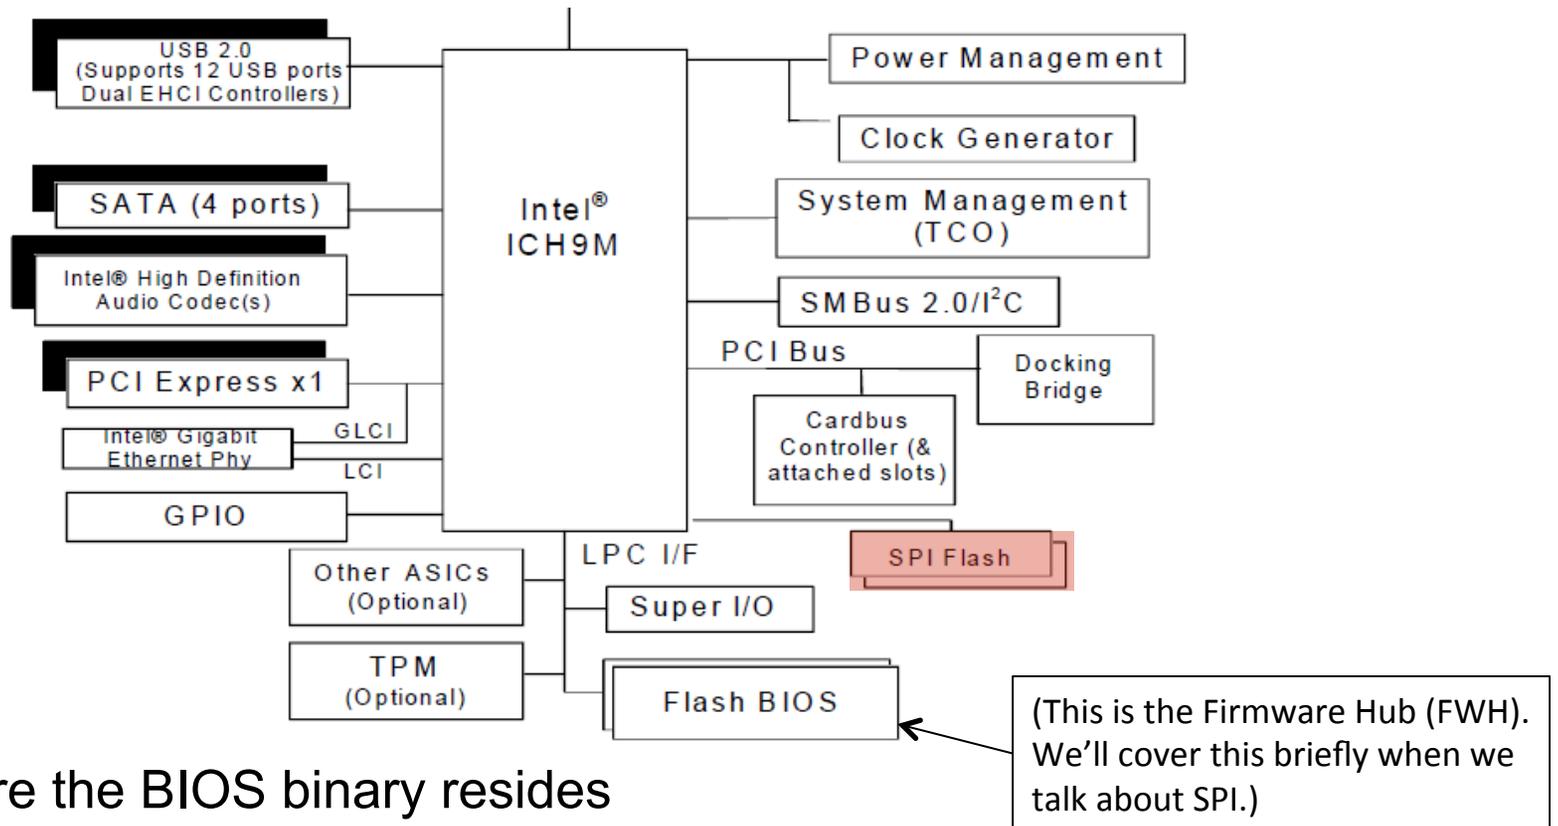

- For this course on BIOS/UEFI security, the aspects of the MCH (or Platform Controller Hub (PCH) as it has evolved to) we care about most are:
 1. Chipset Configuration registers
 2. DRAM Controller Registers
- In PCH systems the DRAM Controller Registers move into the CPU (we will talk about this in a bit)

- I/O Controller Hub
- Interfaces the MCH (and thus the processor) to system devices

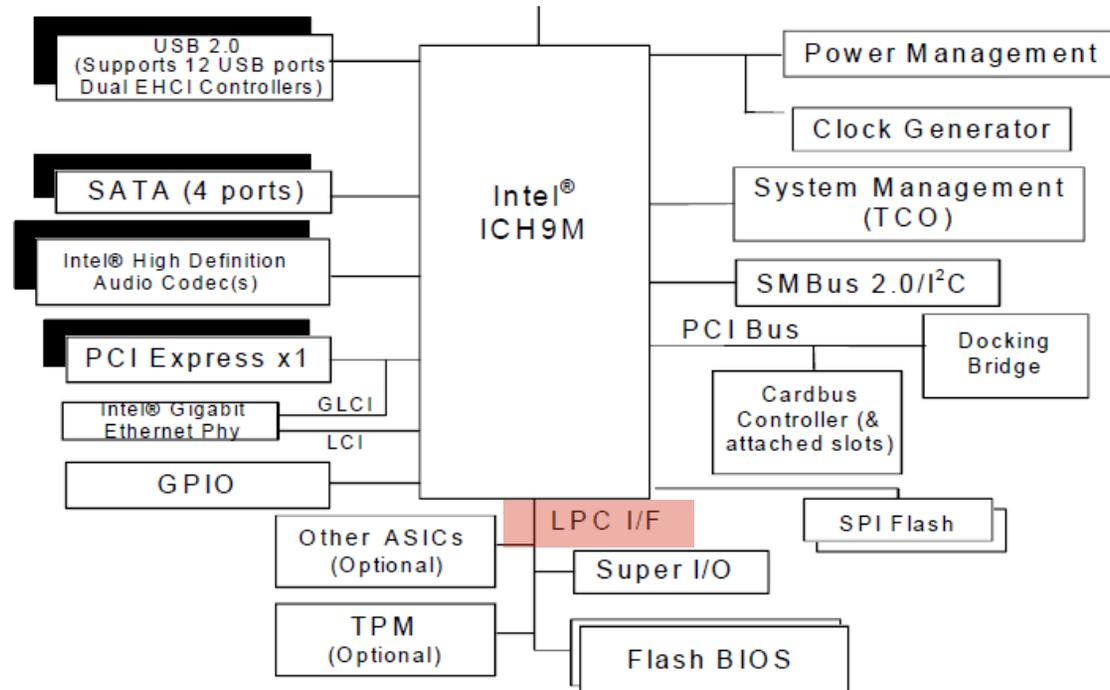

Serial-Peripheral Interface (SPI)

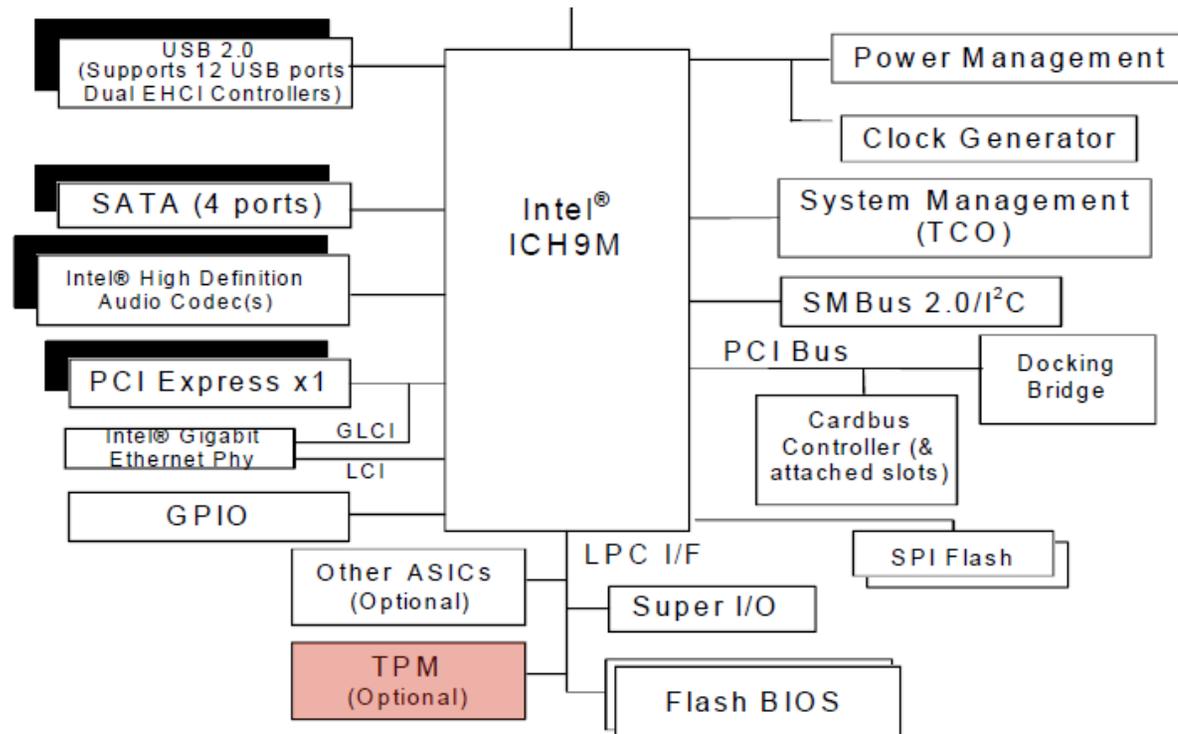

- It's where the BIOS binary resides
- CPU execution starts here upon system startup
- Interface to the device is Memory-Mapped
- We'll cover memory-mapping in the Address Space portion of the course
- From a software development, configuration is still the same when the ICH is consolidated into a PCH

Low-Pin Count (LPC)

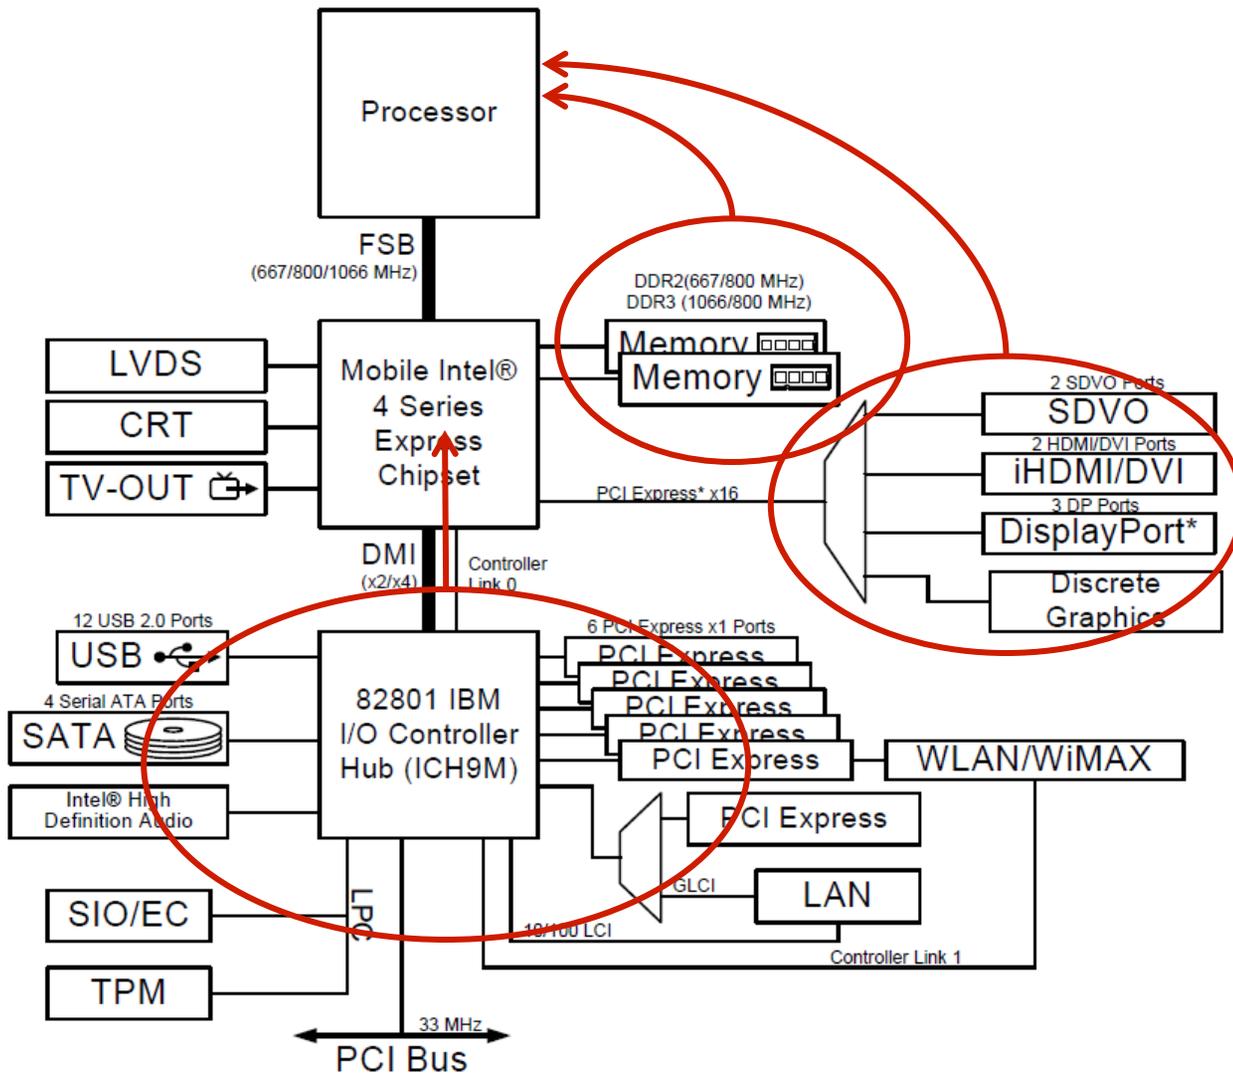

- The devices on the ICH which we care about most are:
- LPC (Low-Pin Count) controller device
- Firmware Hub (legacy)
- Trusted Platform Module (TPM)

Trusted Platform Module (TPM)

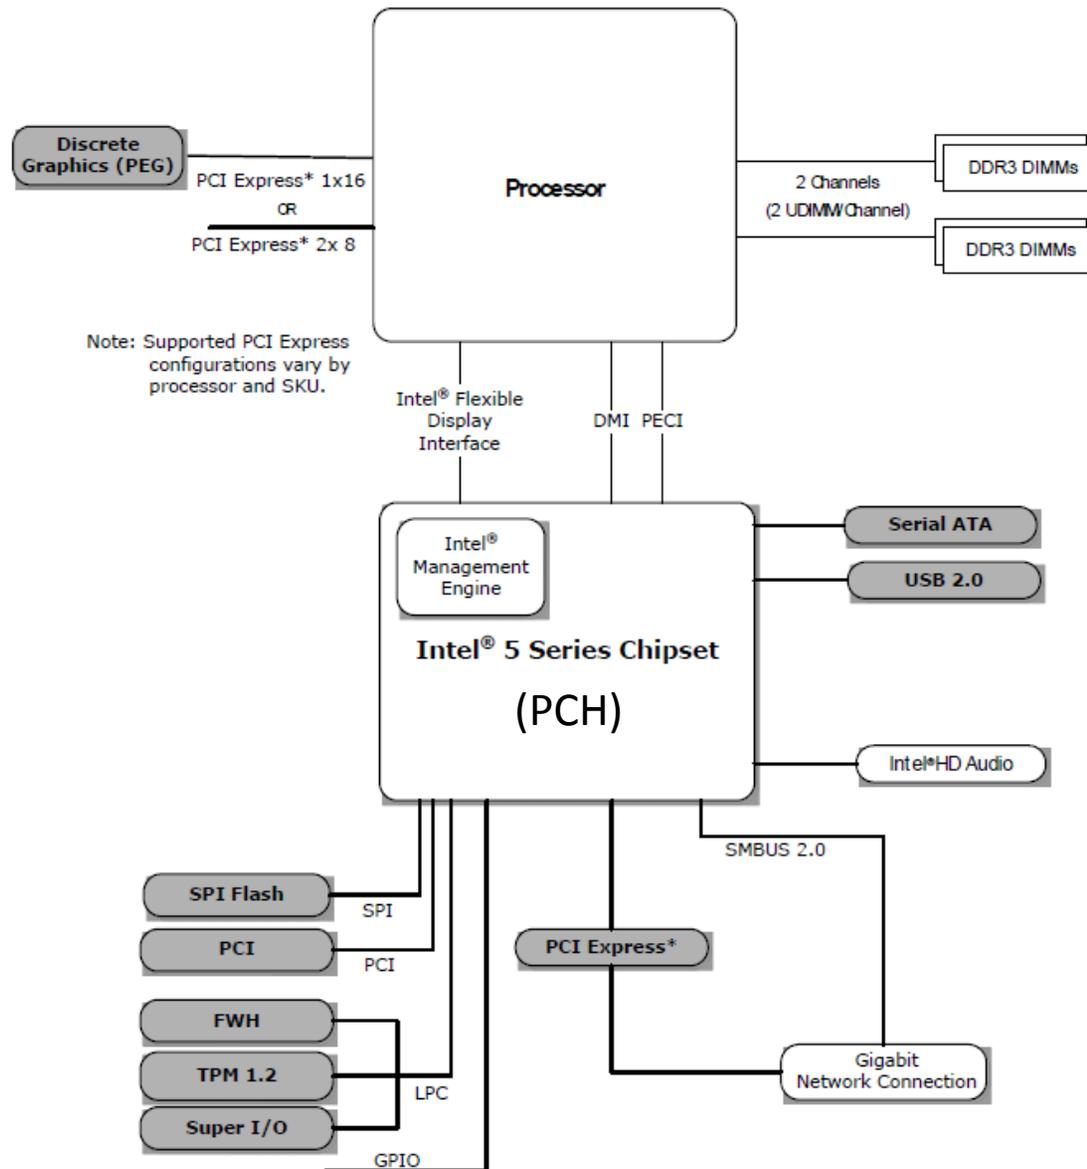

- Extends the security functions within the TPM chip to the CPU/system
- Memory-Mapped (fixed address)
- Software operation is still the same when the ICH is consolidated into a PCH

Evolution to Platform Controller Hub (PCH)

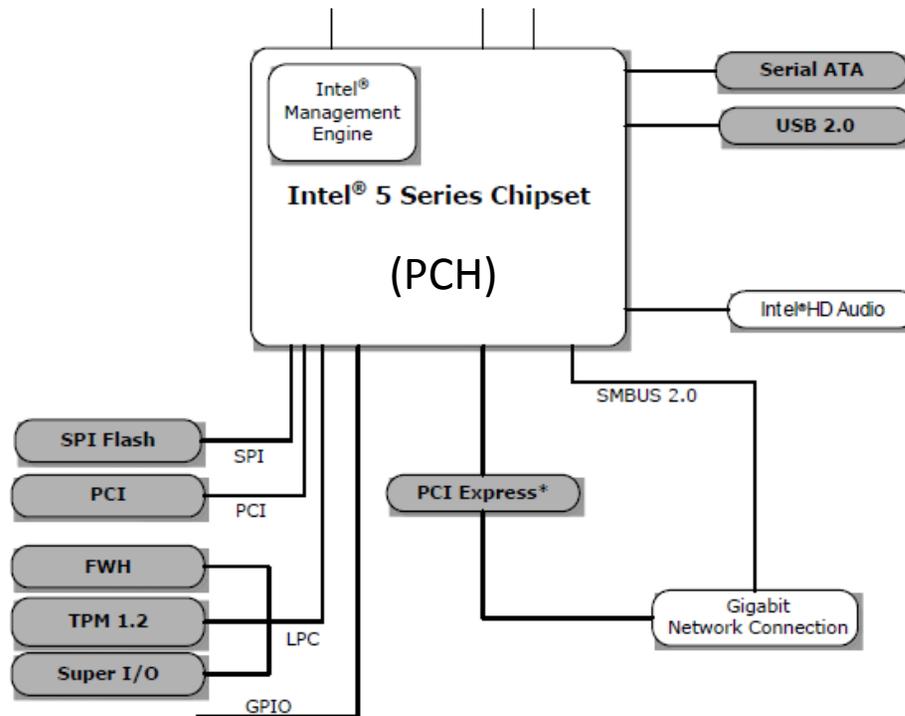

- Bottleneck reduction
- Memory Controller moved into the CPU
 - AMD did this in ~2003 with Athlon64
 - Intel ~2008 (Core i-series CPU)
- Graphics processing unit too
- The Northbridge was essentially eliminated to form a single component (PCH)
- Overall trend is to move high-bottleneck areas closer to the CPU which has the fastest clock on the system

Now everything's just PCHy

- Shown here is the Intel 5-series chipset
- First iteration of the consolidation into a single Platform Controller Hub (PCH)
- AMD did similar in 2003, but I don't want to throw too many hardware diagrams at you (despite being different at the hardware level, logically they are similar if not the same)
- Better to show you just a few, explain why they are the way they are so then you can interpret new/different ones yourself
- Processor is starting to resemble a System On a Chip (SoC)

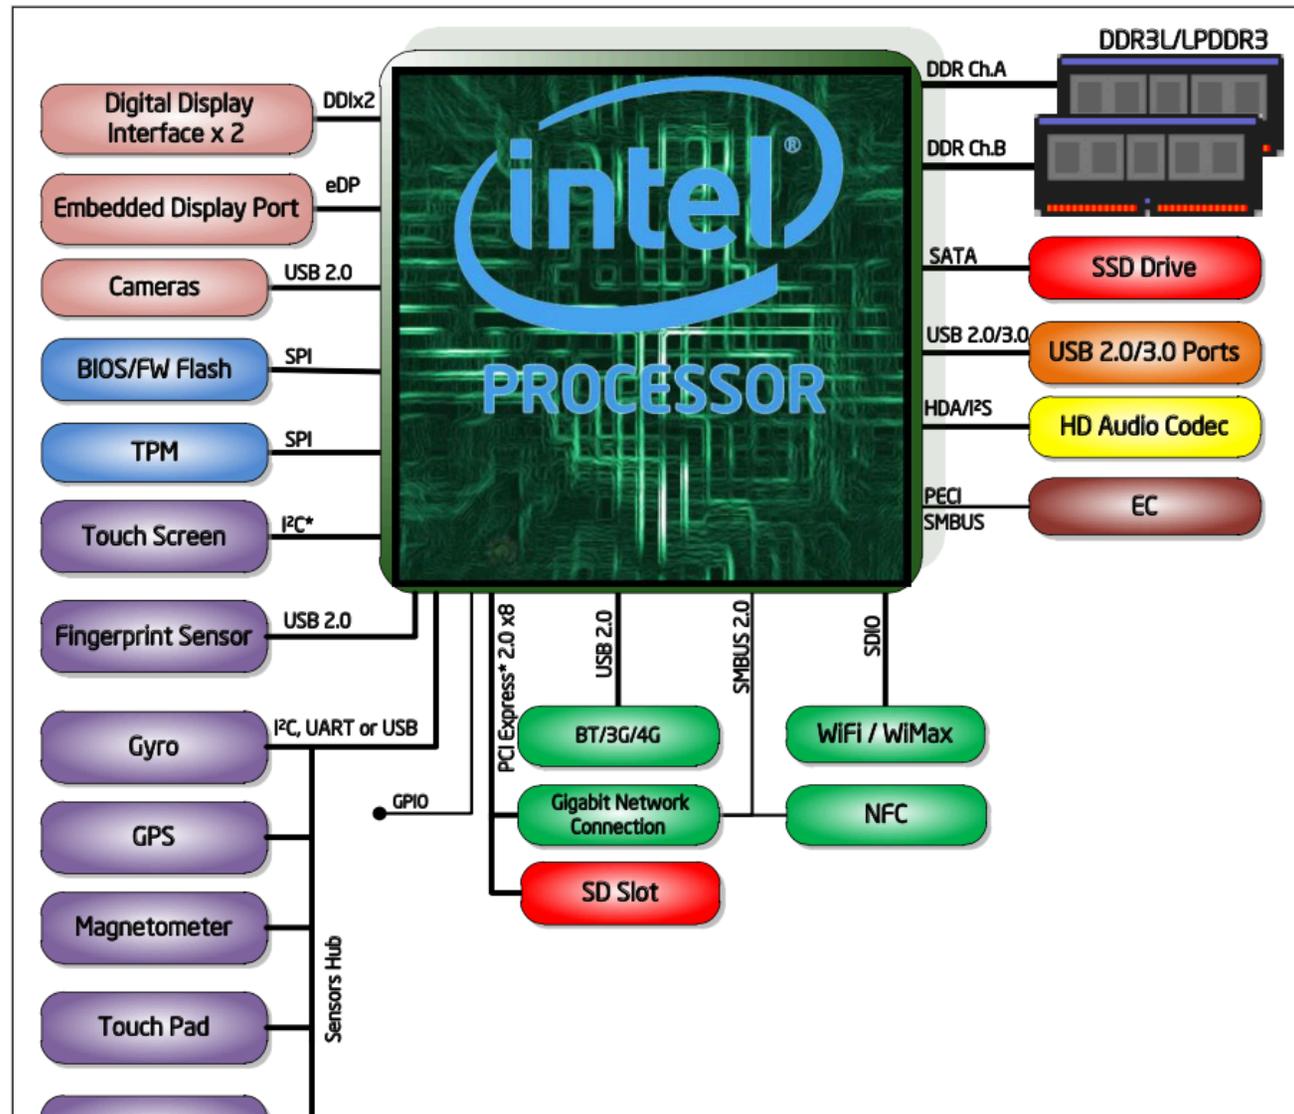

Platform Controller Hub (PCH)

- All the ICH components that we cared about for this course are still present
 - From a software standpoint, even their mode of access is the same
- Functionally speaking, most of what we'll be looking at is agnostic as to whether its MCH/ICH or PCH
 - There are a few exceptions and those will be addressed as they crop up as well as how you account for them

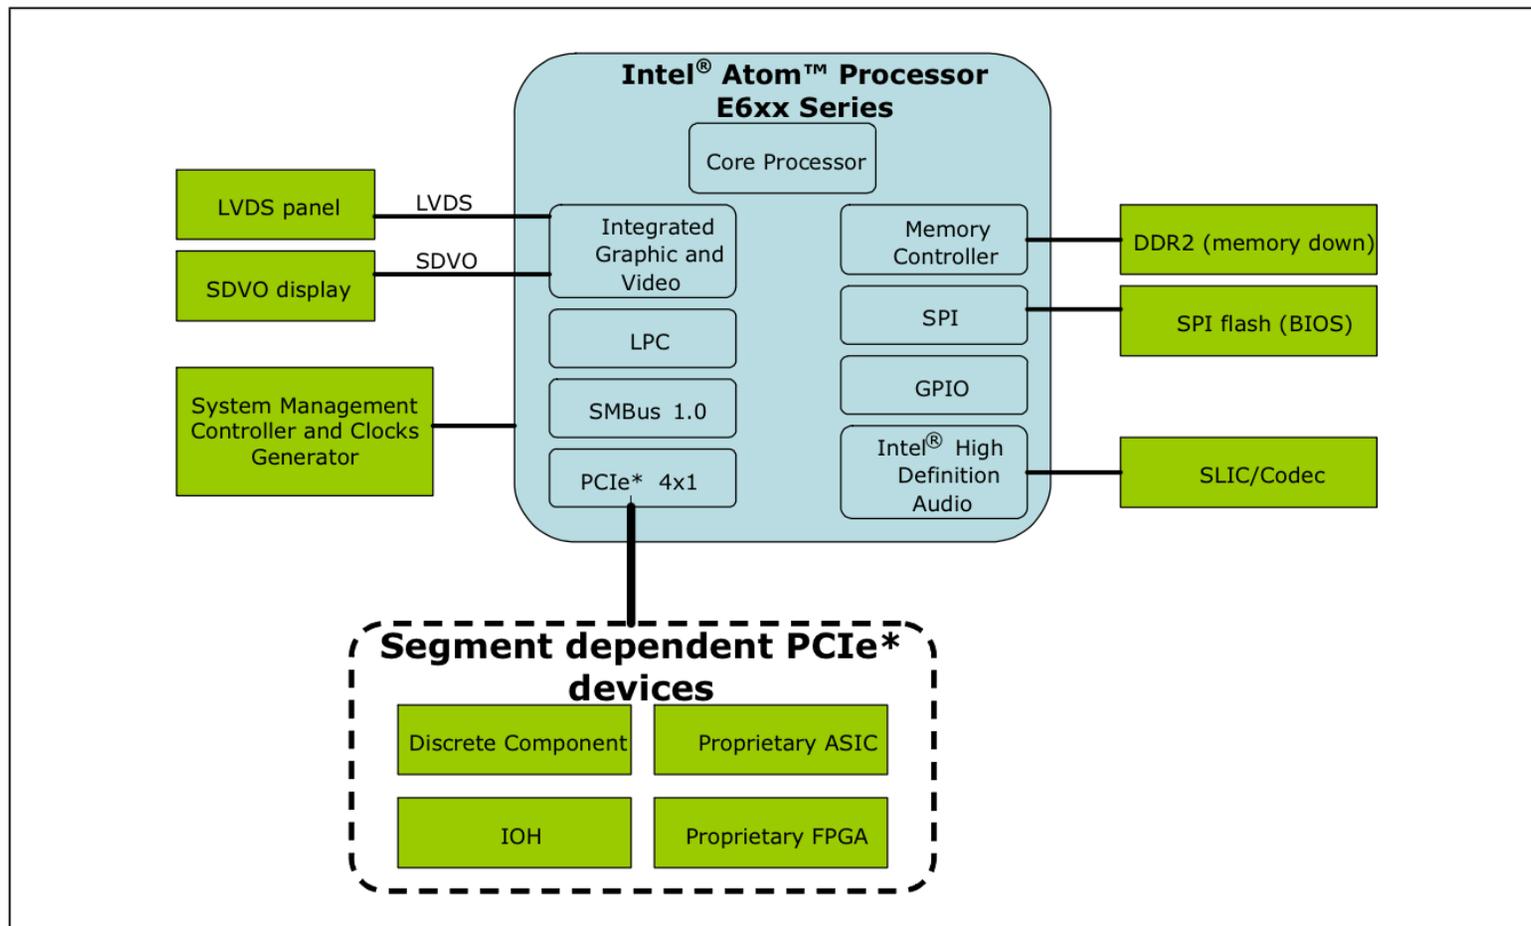

Aside: Yeah it's really getting SoCish: Haswell/Broadwell mobile

Processor Platform Block Diagram

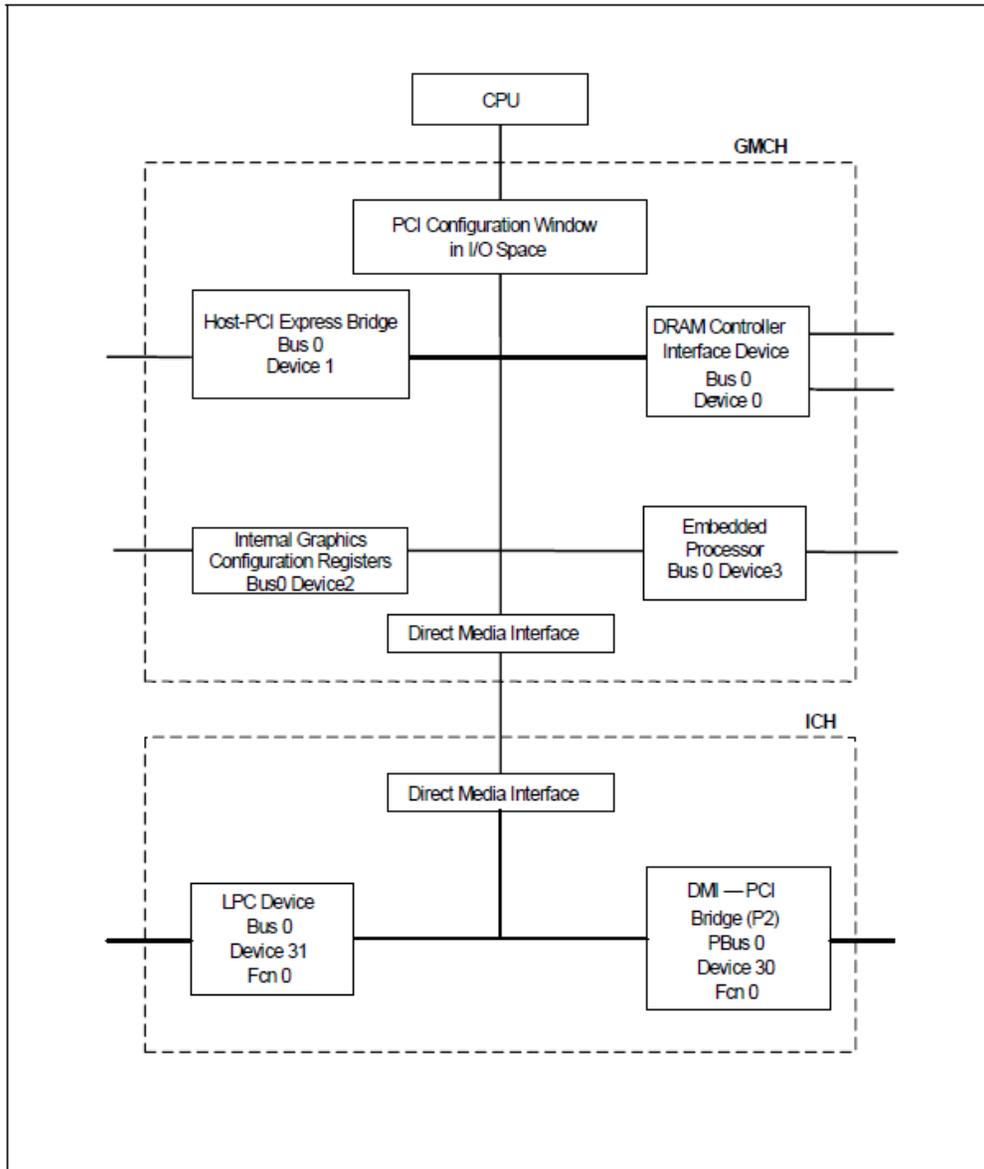

Aside: Intel does make some SoCs, their “Atom” series. Out of scope for today

System Block Diagram Example

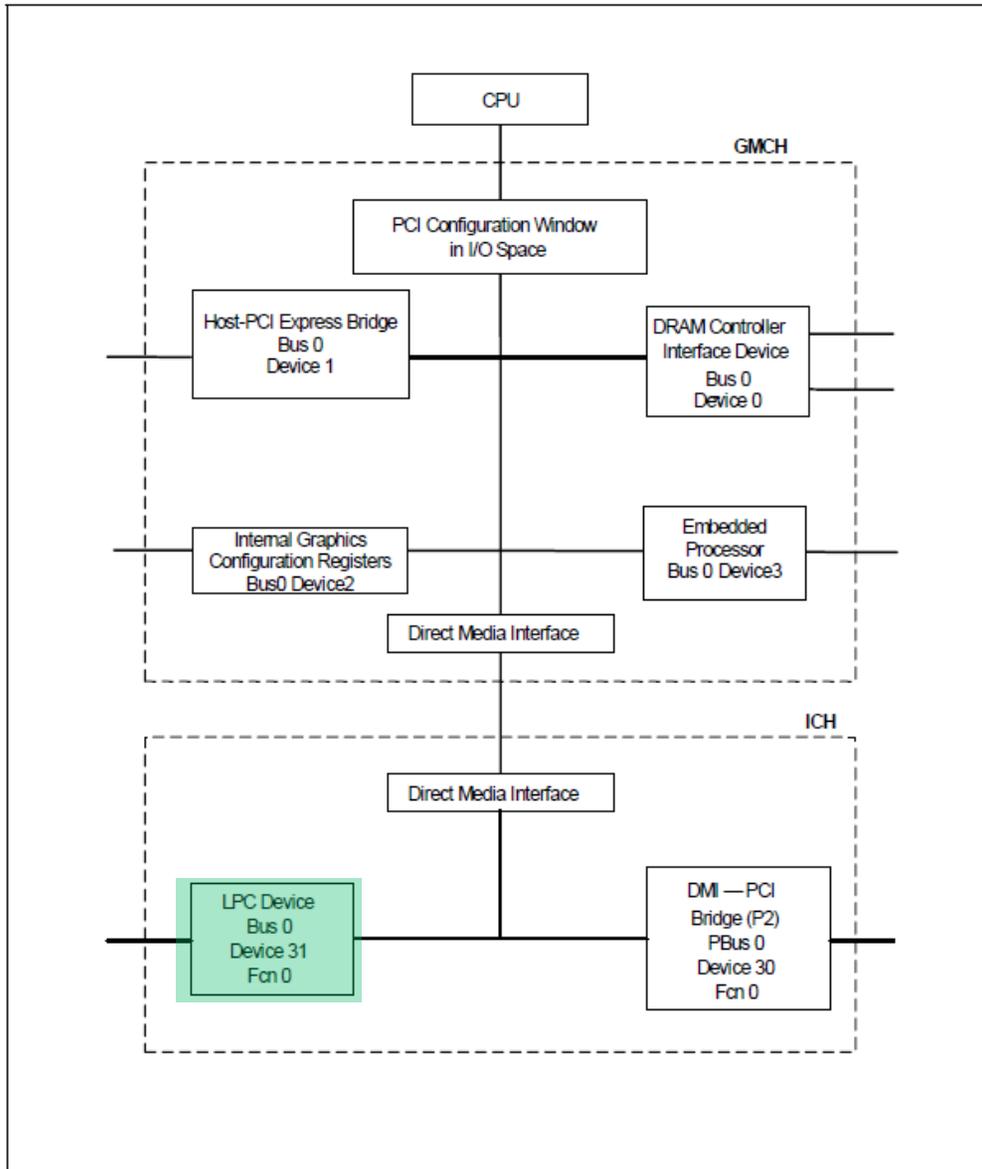

Software Model

- This is how the processor sees the chipset devices
- Not actually a complete diagram, there are more devices listed in the datasheet than what Intel included in this diagram
- Some devices have additional functions (it's a PCI-thing which we'll talk about)

* Device 2 won't be implemented if there is an external graphics card.

Device 31: LPC Interface Bridge

- Device 31 – Low Pin Count Interface (LPC) Bridge
- Located on ICH (or PCH if it's a PCH system)
- Implements various system management functions
- We reference this device a lot
- Spec: <http://www.intel.com/design/chipsets/industry/25128901.pdf> (*Low Pin Count Interface Specification, Revision 1.1*)

Datasheet will list all PCI Devices

Bus:Device:Function	Function Description
Bus 0:Device 30:Function 0	DMI-to-PCI Bridge
Bus 0:Device 31:Function 0	LPC Controller ¹
Bus 0:Device 31:Function 2	SATA Controller #1
Bus 0:Device 31:Function 5	SATA Controller #2 ³
Bus 0:Device 31:Function 6	Thermal Subsystem
Bus 0:Device 31:Function 3	SMBus Controller
Bus 0:Device 29:Function 0	USB FS/LS UHCI Controller #1
Bus 0:Device 29:Function 1	USB FS/LS UHCI Controller #2
Bus 0:Device 29:Function 2	USB FS/LS UHCI Controller #3
Bus 0:Device 29:Function 3	USB FS/LS UHCI Controller #6 ²
Bus 0:Device 29:Function 7	USB HS EHCI Controller #1
Bus 0:Device 26:Function 0	USB FS/LS UHCI Controller #4
Bus 0:Device 26:Function 1	USB FS/LS UHCI Controller #5
Bus 0:Device 26:Function 2	USB FS/LS UHCI Controller #6 ²
Bus 0:Device 26:Function 7	USB HS EHCI Controller #2
Bus 0:Device 28:Function 0	PCI Express [*] Port 1
Bus 0:Device 28:Function 1	PCI Express Port 2
Bus 0:Device 28:Function 2	PCI Express Port 3
Bus 0:Device 28:Function 3	PCI Express Port 4
Bus 0:Device 28:Function 4	PCI Express Port 5
Bus 0:Device 28:Function 5	PCI Express Port 6
Bus 0:Device 27:Function 0	Intel [®] High Definition Audio Controller
Bus 0:Device 25:Function 0	Gigabit Ethernet Controller

NOTES:

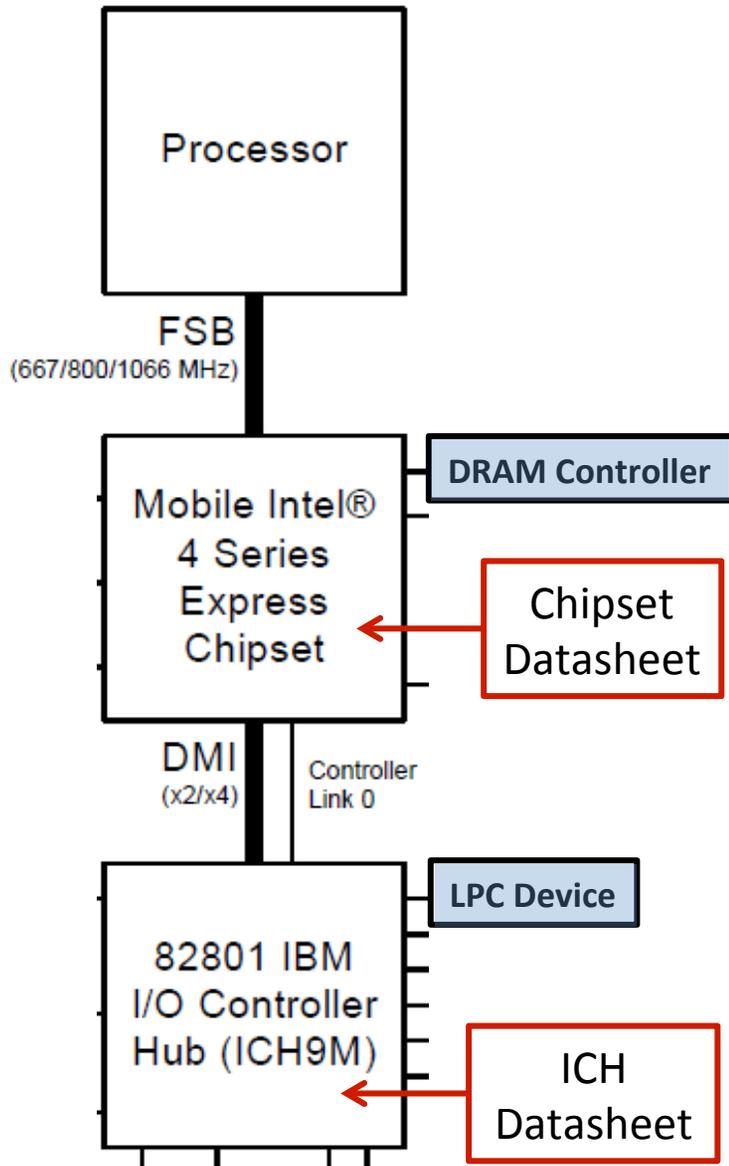

1. The PCI-to-LPC bridge contains registers that control LPC, Power Management, System Management, GPIO, Processor Interface, RTC, Interrupts, Timers, and DMA
2. Device 26:Function 2 maybe configured as Device 29:Function 3 during BIOS Post.
3. SATA Controller 2 is only visible when D31:F2 CC.SCC=01h.

- So as I said, there are devices which were not included in the chipset diagram provided by Intel in the Mobile 4-Series datasheet.
- They're not all important from a security perspective, but provided here for reference

Chipset Identification

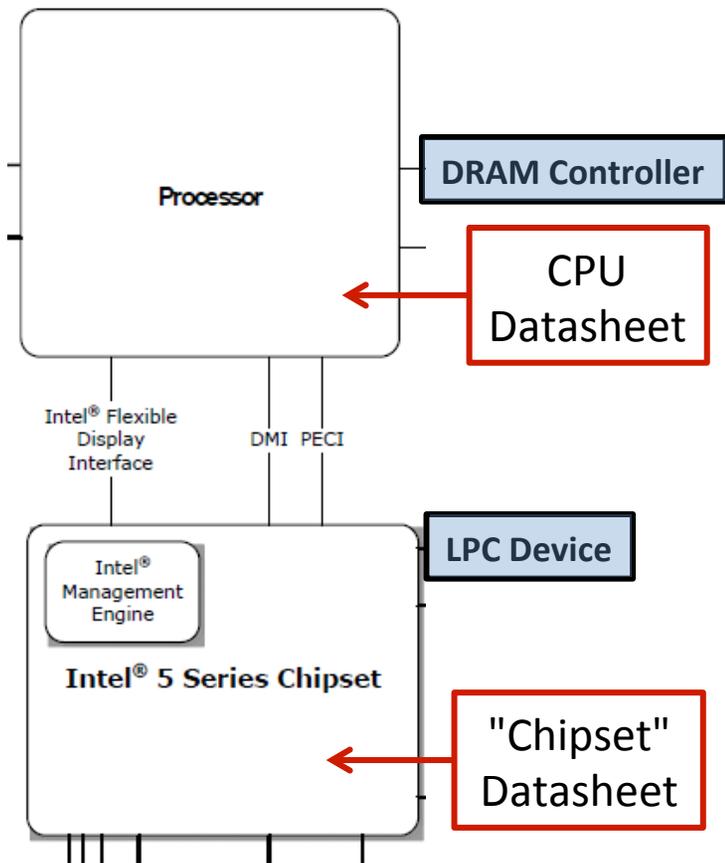

- Goal: Identify the Chipset and/or Controller Hub
- Reasons: (1) To find the datasheet, and (2) know the locations of those registers which we will be probing to determine whether a system is vulnerable
 - Some have stayed the same (same name, same offset) over the years (LPC, BIOS_CNTL) while others have “bounced around a little”
 - Our demonstrations/slides are all on the Mobile 4-Series Chipset and IO Controller Hub Family 9
 - However, the functionality provided by these registers still exist in the latest architecture (assuming they aren’t just still the “same old registers”)
 - We want *you* to be able to locate/analyze these (ie: teaching you to fish)
- Ok I’m convinced! So how do we find out?
 - We are “pretending” that we don’t have eyes on the platform itself:
 - In other words, we are using RW-Everything in this example, but RW-E accesses the PCI configuration space which we also could do programmatically

Strategy:

- Many of the registers we care about are located in two separate devices: (1) LPC Device, and (2) DRAM-Controller
- In legacy Chipsets the LPC device is located in the IO Controller Hub and the DRAM-Controller is located in the Memory Controller Hub
- The datasheet containing the information related to the DRAM controller will be found in the Chipset datasheet
- The datasheet containing the LPC-related information will be found in the “I/O Controller Hub” datasheet

Strategy:

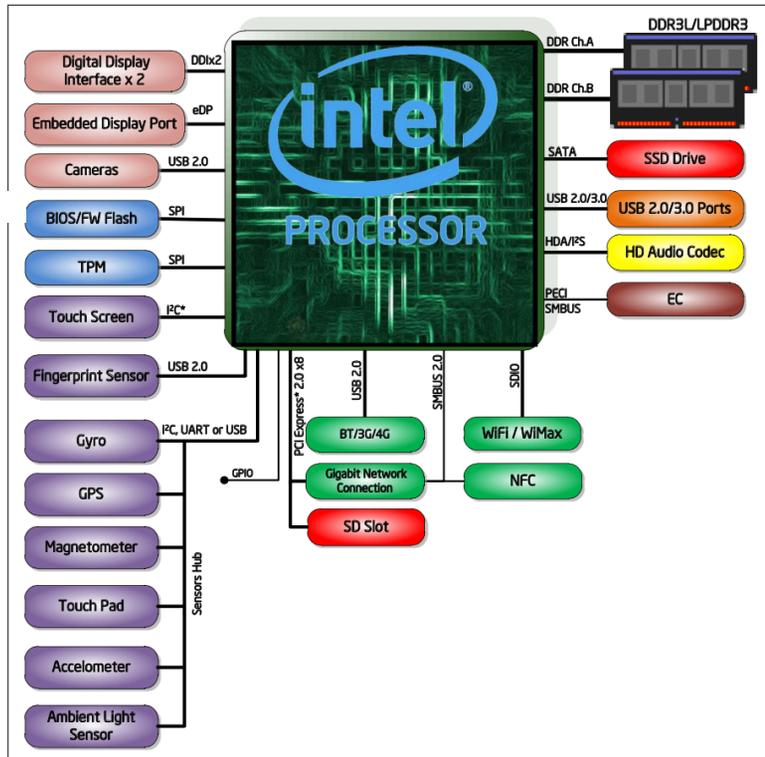

- Many of the registers we care about are located in two separate devices: (1) LPC Device, and (2) DRAM-Controller
- In Modern "Chipsets" (PCH) the LPC device is located in the Platform Controller Hub and the DRAM-Controller is located in the Processor
- The datasheet containing the information related to the DRAM controller will be found in the processor datasheet
- The datasheet containing the LPC-related information will be found in the Chipset datasheet

Strategy:

- If your PCI LCP device ID lookup says something like “Wildcat Point-LP”, that means you’re using a Broadwell/5th generation chip
- The DRAM controller / Host Device ID will still be in the CPU specification update
- The LCP device ID can be found in the CPU’s associated “IO datasheet”

Processor Platform Block Diagram

Strategy: Additional Notes

1. You do not have to know in advance whether the architecture is a modern chipset or otherwise, the process of identifying the device ID's will tell you that

2. Because we're identifying PCI devices, this same strategy will work on an AMD system (which is completely left out in this course)
 - However, identifying the applicable registers and offsets is an exercise left to you (or me if I get my hands on an enterprise system with an AMD processor)

Get the LPC Device ID

The screenshot shows the RW - Read & Write Utility v1.4.9.7 interface. The main window displays the PCI configuration space for 'Bus 00, Device 1F, Function 00 - Intel Corporation ISA Bridge'. The device ID is 0x2917, which is circled in red. The configuration space is shown as a table of 1024 bytes (0x0000 to 0x03FF) in 4-byte increments. The device ID is located at offset 0x0002.

Offset	0100	0302	0504	0706	0908	0B0A	0D0C	0F0E
00	8086	2917	0107	0210	0003	0601	0000	0080
10	0000	0000	0000	0000	0000	0000	0000	0000
20	0000	0000	0000	0000	0000	0000	1028	0233
30	0000	0000	00E0	0000	0000	0000	0000	0000
40	1001	0000	0080	0000	1081	0000	0010	0000
50	0000	0000	0000	0000	0000	0000	0000	0000
60	8A83	8A8B	00D1	0000	838A	808B	00F8	0000
70	0000	0000	0000	0000	0000	0000	0000	0000
80	0000	3C04	0901	007C	0000	0000	0C81	003C
90	0000	0000	0000	0000	0000	0000	0000	0000

- Will tell us the Controller Hub family (therefore either ICH datasheet if legacy or chipset datasheet otherwise)
- Bus 0, Device 31 (1Fh), Function 0, Offset 2 (2-bytes)
- Not sure where RW Everything gets the names of its PCI devices from
- In this example, the LPC Device ID is 0x2917

Device ID Lookup

- <http://pciids.sourceforge.net>
- <http://pci-ids.ucw.cz/> (same site, alternate location)

The PCI ID Repository
The home of the `pci.ids` file

This is a public repository of all known ID's used in PCI devices: ID's of vendors, devices, subsystems and device classes. full human-readable names instead of cryptic numeric codes.

Browse

You can use our web interface to browse the lists and also to submit new entries or to update the existing ones:

- [PCI devices](#)
- [PCI device classes](#)

You may want to read [help](#) before you start using the web interface.

Download

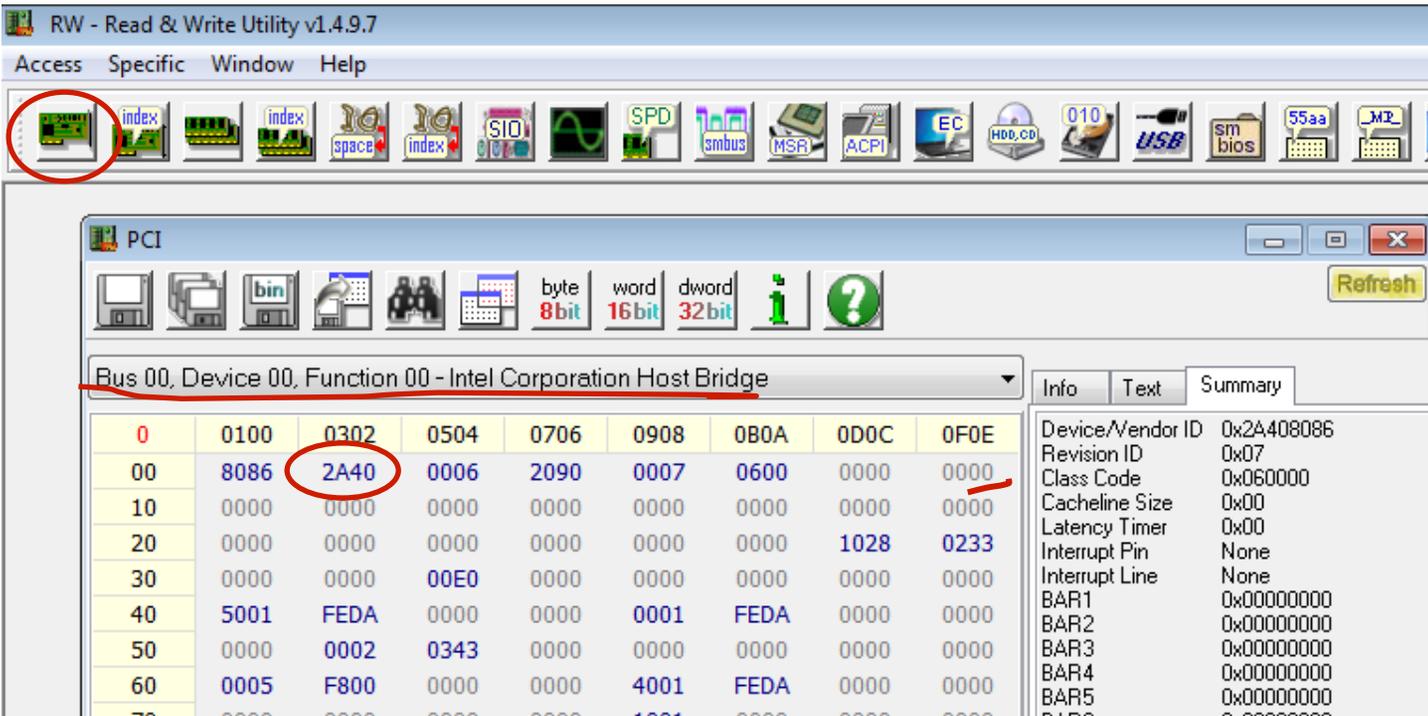

We generate daily snapshots of the database in form of a `pci.ids` file

- [pci.ids](#)
- [pci.ids.gz](#) (compressed by gzip)
- [pci.ids.bz2](#) (compressed by bzip2)

2914	82801IO (ICH9DO)	LPC Interface Control
	1028 0211	Optiplex 755
2916	82801IR (ICH9R)	LPC Interface Control
	1028 020d	Inspiron 530
	103c 2a6f	Asus IPIBL-LB Motherboard
	1043 8277	P5K PRO Motherboard
	8086 5044	Desktop Board DP35DP
2917	ICH9M-E	LPC Interface Controller
	e4bf cc4d	CCM-BOOGIE
2918	82801IB (ICH9)	LPC Interface Controlle

- Device ID 0x2917 is part of the ICH9M-E family
- <http://www.intel.com/content/www/us/en/io/io-controller-hub-9-datasheet.html>

Get the Memory Controller Device ID

- Read the 2-byte Device ID of the Memory Controller:
- Bus 0, Device 0, Function 0, Offset 2
- In this case RW Everything calls it a Host bridge, but as you can see at offset 0x0E in it's header, it is not a bridge
 - PCI-related fact which we'll cover in PCI
- In this sample case the Memory Controller Device ID is 0x2A40

Device ID Lookup

- <http://pciids.sourceforge.net>

e4bf cc4d CCM-BOOGIE
2a41 Mobile 4 Series Chipset PCI Express Graph
```

- Device ID 0x2a40 is part of the Mobile 4-Series chipset family
- <http://www.intel.com/assets/PDF/datasheet/320122.pdf>

So what we have learned about this E6400

- The LPC Device ID is 2917h
 - ICH9M-E Controller Hub
 - Member of the IO Controller Hub 9 family
- The Memory Controller Device ID is 2A40h
 - Mobile 4-Series Chipset Memory Controller
- Therefore this is a legacy chipset
 - DRAM controller is located in the chipset
 - LPC is located in the IO Controller Hub
- The same steps will work on a new system
 - The DRAM controller will be located on the processor
 - The LPC device will be located in the chipset (aka: platform controller hub)
- Sometimes there may be ambiguity. A discussion of how to resolve some forms of ambiguity was moved to the backup slides for this slide deck for time reasons.

Beware: Gotcha #1

PCI

Bus 00, Device 00, Function 00 - Intel Corporation Host Bridge

0	0100	0302	0504	0706	0908	0B0A	0D0C	0F0E
00	8086	0104	0006	2090	0009	0600	0000	0000
10	0000	0000	0000	0000	0000	0000	0000	0000
20	0000	0000	0000	0000	0000	0000	1028	0493
30	0000	0000	00E0	0000	0000	0000	0000	0000
40	9001	FED1	0000	0000	0001	FED1	0000	0000
50	0211	0000	0011	0000	000F	CF90	0047	CB00
60	0005	F800	0000	0000	8001	FED1	0000	0000

- Verify the Device ID you look up is for the correct vendor
 - Different Vendors can use the same Device IDs
 - Vendor ID's are allocated by the PCI SIG and are always unique
- The above Memory Controller Device ID of 0104h returns multiple hits on <http://pci-ids.ucw.cz>
 - But it's the 8086h (Intel) one that we want

Beware: Gotcha #2

- It's good to cross-reference more than one source...
- Where one fails (either returns an incorrect device, or finds no device at all), another may succeed
- www.PCIDatabase.com

PCI Vendor and Device Lists

This page is primarily intended as an [engineering resource](#) is that there is no other centralized database of PCI devices furnished by those working in the PCI market. Feel free to

What's available here:

PCI Vendor List [By Name](#) or [by Vendor ID](#): from the devices they manufacture. (These lists are long, and as well.

[PCI C Sample Code](#): contains sample C code that can

Vendor Search: Search

Device Search: Search

Device Search Results

Returning 1 match for: "2917"
Sorted by: Device ID

Device Id	Chip Description	Vendor Id	Vendor Name
0x27C1	AHCI Controller	0x8086	Intel Corporation

Not always a hit

Specification Updates

- For an Intel system, a given device family (Processor, IO Controller Hub, Chipset) will have a separate datasheet entitled “Specification Update”
- The spec update provides typo-fixes and such but also provides the device ID’s for each revision within that particular device family

ICH Family 9 Specification Update

Device Function	Description	Intel® ICH9 Dev ID ¹	ICH9 A2 Rev ID	ICH9 A3 Rev ID	Comments
	LPC	2912h	02h	N/A	ICH9DH
		2914h	02h	N/A	ICH9DO
		2916h	02h	N/A	ICH9R
		2918h	02h	N/A	ICH9
		2917h	02h	03h	ICH9M-E
		2919h	02h	03h	ICH9M

In Summary

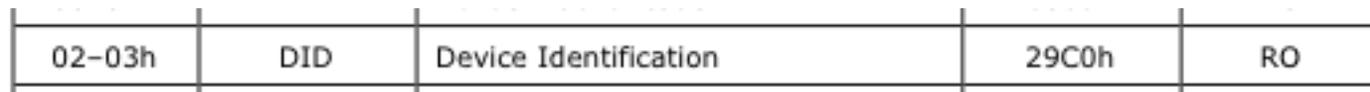

- DRAM Controller / Host Bridge PCI “Device IDs” can be found in MCH or CPU datasheets
 - This device will be used to find SPI flash programming registers
- LPC Controller PCI “Device IDs” can be found in the ICH, PCH, or CPU’s “IO” “specification update” datasheets
 - This device will be used to find SPI flash access control registers
- These two device IDs together provide all the information we need for identification of hardware for BIOS security checks

Device IDs

- I'm starting to get tired of spending the time it takes to have everyone look this up, so I've started to make a cheat sheet ;)

DRAM Controller/Host Bridge

- Cheat sheet

Bit	Access & Default	Description
15:0	RO 29B0h 29C0h 29D0h	Device Identification Number (DID): 29B0h = Intel® 82Q35 GMCH 29C0h = Intel® 82G33/82P35 (G)MCH 29D0h = Intel® 82Q33 GMCH

The Intel 4 Series Chipset (G)MCH may be identified by the following register contents:

3.1.2 DID—Device Identification

This register combined with the Vendor Identification register uniquely identifies any PCI device.

B/D/F/Type: 0/0/0/CFG			Access: RO; RO_V	
Size: 16	Default Value: 0C00h		Address Offset: 2h	
Bit Range	Acronym	Description	Default	Access
15:4	DID_MSB	Device Identification Number MSB: This is the upper part of device identification assigned to the processor.	0C0h	RO
3:2	DID_SKU	Device Identification Number SKU: This is the middle part of device identification assigned to the Processor.	0h	RO_V
1:0	DID_LSB	Device Identification Number LSB: This is the lower part of device identification assigned to the Processor.	0h	RO

1c4e Q67 Express Chipset Family LPC Controller
1c4f QM67 Express Chipset Family LPC Controller
1028 04a3 Precision M4600

- As before, Read the 2-byte Device ID of the LPC device:
- Bus 0, Device 31d (1Fh), Function 0, Offset 2
- If the Controller Hub is referred to as the Chipset, it's a PCH device.
- So in a PCH system, the LPC controller will tell us the chipset family
- So this is a QM67 Express Chipset (6-series chipset)
- Datasheet:
<http://www.intel.com/content/www/us/en/chipsets/6-chipset-c200-chipset-datasheet.html>

Identify the MCH Device ID

1028 04aa XPS 8300
1043 844d P8P67 Deluxe Motherboard

0101 Xeon E3-1200/2nd Generation Core Processor Family PC
1028 04b2 Vostro 3350
106b 00dc MacBookPro8,2 [Core i7, 15", 2011]

0102 2nd Generation Core Processor Family Integrated Graph
1028 04aa XPS 8300

0104 2nd Generation Core Processor Family DRAM Controller
1028 04a3 Precision M4600

- As before, Read the 2-byte Device ID of the MCH (DRAM Controller):
- Bus 0, Device 0, Function 0, Offset 2
- In this sample case the Memory Controller Device ID is 0x0104
- 2nd Generation Core processor Family
- However there are separate datasheets for the 2nd generation Mobile and Desktop family datasheets
- To identify the CPU, we have to download the Specification updates for each

Hmm...Either Mobile or Desktop* CPU

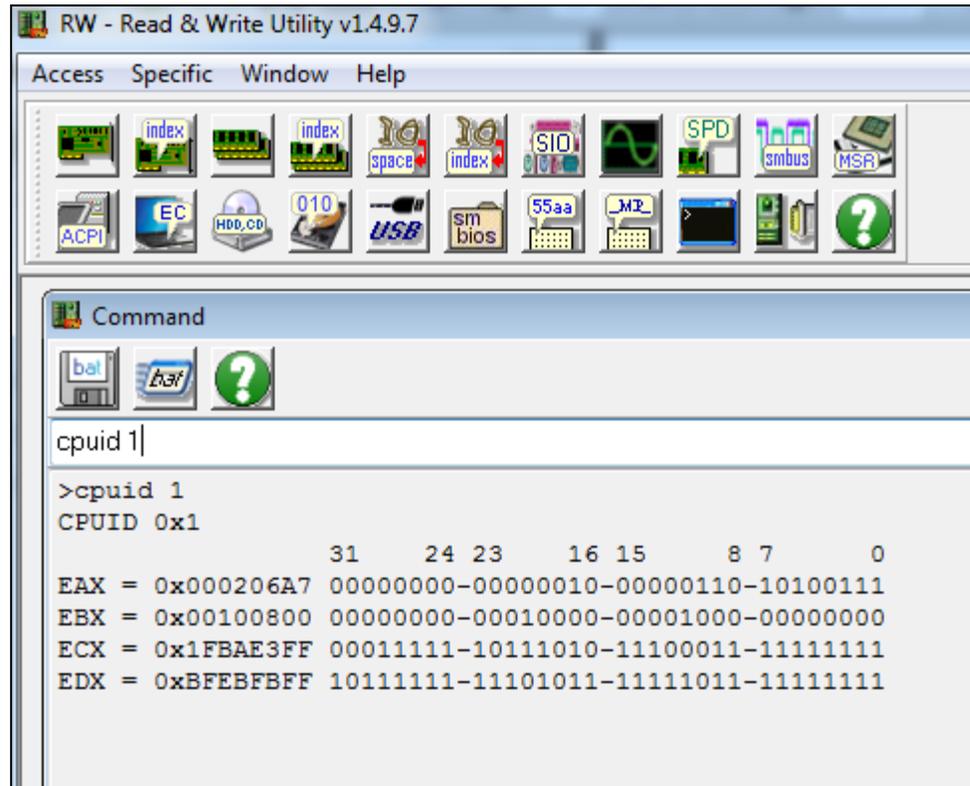

- Download the Specification Updates for both the Desktop and Mobile family (2nd generation Core series processor)
 - <http://www.intel.com/content/dam/www/public/us/en/documents/specification-updates/2nd-gen-core-family-mobile-specification-update.pdf>
 - <http://www.intel.com/content/dam/www/public/us/en/documents/specification-updates/2nd-gen-core-desktop-specification-update.pdf>

Stepping	Vendor ID ¹	Host Device ID ²	Processor Graphics Device ID ³	Revision ID ⁴
D-2	8086h	0104h	GT1: 0106h GT2: 0116h GT2 (>1.3 GHz Turbo): 126h	09h
J-1	8086h	0104h	GT1: 0106h GT2: 0116h GT2 (>1.3 GHz Turbo): 126h	09h

- In this case, the DRAM Controller (MCH) device ID of 0104h is defined in the Mobile series specification update

*We're operating under the assumption that this is being done remotely so we can't just "look."₆₃

Get the CPU Stepping Information

- When EAX initialized with a value of '1', CPUID returns the Extended Family, Extended Model, Processor Type, Family Code, Model Number and Stepping ID value (in EAX)
- You can run CPUID in RW Everything
 - CPUID requires no privileges to run

Identify the CPU Stepping Information

Reserved	Extended Family ¹	Extended Model ²	Reserved	Processor Type ³	Family Code ⁴	Model Number ⁵	Stepping ID ⁶
31:28	27:20	19:16	15:14	13:12	11:8	7:4	3:0
	00000000b	0010b		00b	0110	1010b	xxxxb

Gen2 Core Specification Update Datasheet

```
>cpuid 1
CPUID 0x1
          31  24 23  16 15  8 7  0
EAX = 0x000206A7 00000000-00000010-00000110-10100111
EBX = 0x00100800 00000000-00010000-00001000-00000000
ECX = 0x1FBAE3FF 00011111-10111010-11100011-11111111
EDX = 0xBFEBFBFF 10111111-11101011-11111011-11111111
```

- Extended family tells you which processor family the CPU is of (Pentium, Pentium Pro, Intel Core, etc.)
- Extended Model identifies the particular model within the family
- Processor Type tells you if it's OEM, etc.
- Family Code corresponds to EDX bits [11:8] at system reset
- The Model Number corresponds to EDX bits [7:4] at system reset
 - This is a PCH example and so this CPUID return will differ from our EDX value from the entry vector portion of the course which was of the E6400
- Stepping ID is the revision number of this CPU model
